Exclusive Vinyl – Classic Vinyl – Vinyl on HDF

All the benefits at a glance

If you associate the word “vinyl” with records, it’s time for some fresh thinking and to add some decisive plus points to the material of the good old days. Those who decide on vinyl decide on comfort and cosiness on the one hand – and durability and low maintenance on the other hand. These are the attributes that make moderna vinyl flooring into a reliable – and if you so choose – lifelong partner.

moderna v-lyn - Salta Pine

Exclusive Vinyl

Exclusive Vinyl
moderna v-lyn – Your benefits
Anyone can fit it.

Very easy to fit. Cut, fold, and click into place. Yes – the vinyl flooring is that easy to fit. No specialist knowledge is necessary. No special tools needed.

The flooring with great prospects.

Click and Go

*Stays in Shape.
For ever!*

1. Cut
Cut the flooring to size with a protractor and a cutter knife.

2. Fold
All you have to do is fold them to separate the cut parts successfully.

3. Fit
The flooring is easy to fit in difficult areas such as door frames and can be continued into the next room without the need for expansion joints or transition profiles.

Dimensional stability
Regardless of whether it's cold or hot – variations in temperature have no impact on your new vinyl flooring. It stays in shape. This enables it to be fitted for up to 20 metres a time and without troublesome expansion joints or transition profiles – for a modern living ambience.

Exclusive Vinyl Almost too good to be true

But it is true. The flooring from our v-lyn range not only stands for beauty and living comfort – it has already proven its long-term effectiveness many times over. Whether a large living room or dining room, a hallway that's in frequent use, a lively children's bedroom, or a freshly renovated wellness suite: there are no limits to the possible uses of this flooring. It is also ideal for commercial use, whether in retail outlets, hotels or for exhibition stands.

Product structure v-lyn

- 1. Multi-layer surface (3 layers)
- 2. Decor layer
- 3. Vinyl top layer
- 4. Glass fibre fleece
- 5. Vinyl underlay (counterbalance)

EXPERT TIP!
Thanks to deep stamping, the carrier for the printed image offers high design quality, with a tactile structure and decors indistinguishable from nature.

Vinyl-Flooring on HDF
Including XPS-sound insulation underlay

Reduce stress, time and noise, and lay the flooring and soundproofing all in one go. All in One – i.e. save time when carrying out your alterations and have time to enjoy the comfort of a quiet floor and the pleasant walking feeling! The integrated moisture-resistant XPS footfall sound insulation takes care of a massive reduction in footfall noise and improvement in walking comfort. Thanks to the patented click system and the HDF carrier, this flooring is also easy to lay and evens out bumps and hollows.

Colour: Silver and stainless Steel
Dimension: 42 x 21 x 1000/2700 mm
to be used for floorings from 4 to 9 mm thickness

Legend

Product advantages of vinyl

100 % waterproof
What does it mean for you as a customer that flooring material is 100% waterproof. This flooring is absolutely predestined for use in kitchens and bathrooms. In contrast to other flooring materials, the material does not change on contact with water. It does not swell.

Dimensional stability
Whether cold or heat – temperature fluctuations have no effect on your vinyl flooring. It always retains its form. That makes it possible to lay a continuous length of up to 20 metres, with no troublesome expansion joints and profiles, ensuring a modern home ambience.

Simple laying thanks to the patented click system
In the past, vinyl had to be purchased by the metre from specialist dealers and glued to the floor. Thanks to the simple click system and the handy format, even amateurs can now lay the flooring like a professional.

The UNIFIT system with its patented drop-down solution can be squared off and fitted front-facing and horizontally. This makes it easy-as-pie to fit and means it offers a very stable click connection thanks to the vertical and horizontal locking technology.

Produced under licence of UNILIN

The individual planks can be clicked together very quickly with the tension provided by the tongue and groove connection and installation is easy and secure. The additional option of joining the planks horizontally makes installation easy even in areas that are difficult to access (e.g. below radiators or door frames). This click-system is characterized by its high fitting accuracy, flush positioning with respect to height and a seamless, powerful connection.

The L2C click system is a patented drop-down solution. The planks are angled in alongside and drop-down interlocked head side.

Healthy living environment
moderna vinyl also stands for healthy living. Vinyl still tends to be associated by many people with old-fashioned health-harming PVC. But the quality of vinyl has long reached a completely new level. Special standards and testing within the EU ensure that the limit values of harmful substances are not exceeded.

Warm to the feet
One of the major benefits of vinyl compared to tiles is that vinyl is warm to the feet.

Quiet
Compared to laminate, vinyl is very soft and giving and absorbs loud noises. You will not encounter annoying “clicking or clacking” noises in areas where vinyl is laid. An additional soundproofing layer underneath improves the outcome still further. More quiet, less stress. Quiet floors increase the feel-good factor still more.

3 in 1
Reduce stress, time and noise, and lay the flooring and soundproofing all in one go. All in One – i.e. save time when carrying out your alterations and have time to enjoy the comfort of a quiet floor and the pleasant walking feeling! The integrated moisture-resistant XPS footfall sound insulation takes care of a massive reduction in footfall noise and improvement in walking comfort. Thanks to the patented click system and the HDF carrier, this flooring is also easy to lay and evens out bumps and hollows.

Vinyl layer for easy cleaning and care
HDF carriers for quick and easy laying through patented click system for footfall sound insulation for acoustic noise insulation and enhanced walking comfort. No additional insulation is needed.

Smoothes out uneven areas
Through the three-layer structure, the v-pro + silent product range offers the possibility to smooth out bumps even more effectively. That makes fitting and installation easier still and reduces the amount of preparation needed for laying the flooring.

Easy-care
Because of the soiling-resistant surface seal, vinyl floor coverings are quick and easy to clean. As with laminate floor coverings, it is sufficient to vacuum the floor and then wipe it over with a slightly damp cloth.

Extremely hard-wearing
Vinyl, too, is an enormously hard-wearing material. It is very robust and is ideally suited for all the challenges of everyday family life and also business life.

Renovierungsfreundlich
The v-lyn and v-life product series are especially suited for renovation purposes. Because of their low structural thickness, these floor coverings can be easily laid on an existing underfloor without the need for additional fitting work on door frames or other building elements.

Extra-broad tile format
The v-lyn tile product range has an especially large format. This flooring is very trend-aware. Create space and a calm atmosphere with large formats, which generate a simple, three-dimensional effect.

moderna decors

For all our floor coverings, the best thing you can always do is check them out for yourself. Take a close look and physically feel the decors structure of the various floor coverings. As individual and diverse are the wishes of our customers, so varied and wide-ranging are the decors we have on offer. Visit the specialist retailers to gain your own impression of how our materials look and feel, or take a sample with you and try it out at home. Pay attention to the key parameters such as the decorative appearance, the embossing and the surface finish, as they all help you in deciding which one to choose. Based on our many years of experience, we have created the moderna decors through innovative new developments, achieving an authentic look of real wood, and also in the field of natural stone or tile imitation looking remarkably like the original.

Wood structure

The wood structure can be felt on the surface as embossing. However, the embossing does not precisely correspond to the decor image. However, this discrepancy is virtually imperceptible, both to the touch and to the eye. Compared to a smooth surface, the wood structure presents an authentic, high-quality appearance.

Stone structure

Through the coarse, rough embossing, a stone structure is perfectly imitated. The floor covering looks like stone and also feels like stone. However, it is as warm as wood flooring. The stone structure of our laminates is indistinguishable from a normal stone tile surface.

Relief wood structure

The relief structure is one of the most common and popular surface finishes on the market. The decor image can have a wood look, and thanks to its straight-line character, the relief embossing takes care of a natural look.
